BACKGROUND

Synt is a typeface in the Scotch Roman style with a parametric stem-rhythm. It first appeared in issue 17 of sound and club culture magazine zweikommasieben, particularly at home in an interview with Gabber Eleganza. Designed by the magazine’s co-publisher Kaj Lehmann as part of his ECAL diploma project, Synt reimagines the typefaces documented in *The Practise of Typography* (1900) by Theodore Low De Vinne—a book that tells the story of the Scotch Roman style—in the context of a techno beat. Synt’s rhythm is strict, with each stem at an equal distance from the last, and its speed can be turned up or down by selecting different styles of the font’s slant cuts, which sit at drastic angles. “Another detail of the font is the little kink at the end of the stems,”* notes Lehmann. “It counter-balances the weight and helps to print the typeface sharper.” Four cuts are currently available, a Regular style, Slant (with an angle of 16°), Turbo (with an angle of 32°), and Italics (with an angle of 16°).
